

COMPANY

We have a role in national and global engine industry whom needs pistons, for 30 years since 1976. We have been producing pistons for domestic and international markets years since 1976. We play a major player role in engine industry with our 30 years of experience, expert team of engineers, developing company structure, up to date machinery, product variety, production capacity, after sales services. We made a radical change and assumed the principle of providing production and logistic facilities for engine industry in 2015.

We developed and renewed our technological infrastructure as the results of our R&D efforts to increase our capacity. With these progresses we increased our quality of our products and made them more long lasting. We reached 300.000 product capacity per year with our 300 sort of pistons with the robot technology we use.

We had enlarged our inventory space to reduce the inventory costs and answers the demands when its needed fort he companies we serve. Without any limits we provide the demands not just by periods of years, we also serve the companies by periods of months and weeks.

As MYM we are proud to announce that we are established to provide superior service for the smallest business to the largest firms of national and global engine industry.

Our mission

To show a steady improvement to our well-established past, to increase our production capacity, to extend our distribution network, to extend the durability period of our products and to provide a unique service experience with the support we provide after sales.

Our vision

And that in Turkey as an example of competing firms in the world and was inspired, not only with quality products that we produce at the same time also be a company that makes a difference in the service we provide.

Our strategy

To provide modernization of piston production with our AR-GE work and give a new direction to the national and international motor sector with our after-production services.

MANUFACTURING

We do our manufacturing activities with our 58 employees, in our factories with one of them are 5000 m² outdoor and 4000 m² indoor and the other one is 10000 m² outdoor and 7000 m² indoor at Cerkezko, Tekirdag. We present our products to the market by controlling the quality with our post production devices, and using the latest technology.

RECOMMENDATIONS FOR THE INSTALLATION OF RING AND PISTON

We serve the pistons with pre-assembled piston rings to our customers.
Even so we recommend to check following points:

- Please check if the piston rings fit in their grooves.
- The ring grooves must be clean.
- The top marking on the rings must be upwards to piston crown.
- In case the piston rings have been disassembled, please assemble the rings starting from the lowest ring upwards using appropriate tool. Do not open the rings more than necessary and do not strain the rings more than 1 minute, since it could cause deformation of the ring.
- For oil rings with spring; spring ends must be positioned 180° from ring gap.
- For oil rings 3 pieces type; spring should be assembled first. After the spring has been installed the rails must be mounted holding the spring. The spring ends must be held together to avoid overlapping.
- After assembling the rings, ring gaps are to be positioned with same angle to each other around the piston (Example: On a piston with 3 rings, ring gaps must be positioned 120° to each other).

For a correct installation of the piston into engine, please read following points carefully:

- Some features on a piston like chamber, valve reliefs, pin hole etc. can be asymmetric or eccentric from piston center. For a proper functionality, direction mark on top of the piston must be considered.
- Do not machine any coated and anodized surface.
- Do not measure any dimension on graphite coated surfaces. Uncoated areas are recommended for measurements.
- Diameter value + Sp-Value must be equal to liner diameter. If it is not the case, installation must be cancelled.
- Appropriate tools must be used for installing pistons into engine.
- Removed old parts must be disposed accordingly.

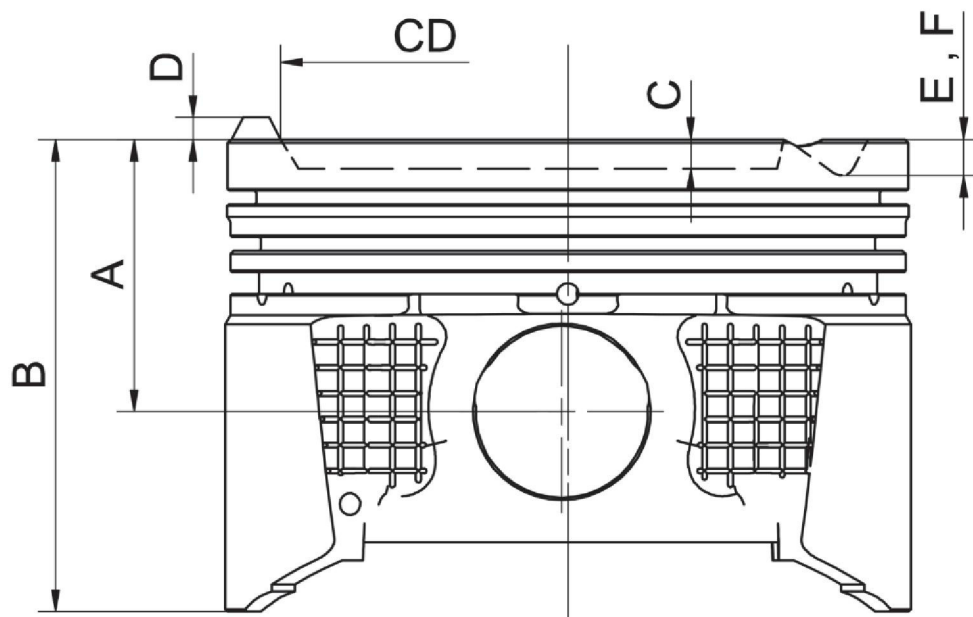

INFORMATION MARKS ON PISTON

PISTON DIMENSIONS

- A - Compression Height
- B - Total Length
- C - Chamber Depth
- D - Dome Height
- CD - Chamber Diameter
- E,F - Valve Cutouts Depth

1) Cross-section configurations

Top Rings		
500	Rectangular ring	
503	Half Keystone ring	
504	Keystone Ring (15°)	
505	Keystone Ring (6°)	
514	Keystone Ring (10°)	

Compression Rings		
501	Taper-faced ring	
502	Taper-faced bevelled ring	
506	Scraper ring	
507	Scraper bevelled ring	
508	Taper-faced Napier ring	
509	Taper-faced Napier bevelled ring	
510	Taper-faced, Half Keystone ring	
511	Taper-faced, Keystone ring	

Oil Rings		
600	Slotted Oil control ring	
601	Bevelled-edge Oil control ring	
602	Double-bevelled Oil control ring	
603	Coil Spring loaded Oil control ring	
604	Coil Spring loaded Bevelled-edge Oil control ring	
605	Coil Spring loaded Double-bevelled Oil control ring	
606	Coil Spring loaded Internal Bevelled-edge Oil control ring	
700	RIK-VENT, Expander Oil control ring	

2) Edge and Face configurations

IF	Internal bevel top	
IFU	Internal bevel bottom	
IW	Internal step top	
IWU	Internal step bottom	
B	Barrel faced	
N	Coated Inlaid faced	

3) Coating and Material configurations

Cr	Surface chromium plating
Cr3	Side chromium plating
Cr4	Full chromium plating
Mo	Surface molybdenum plating
Nit	Nitriding
PI	Plasma spray coating

QBCr	"Quick Break-In" chromium plating
IP	Ion Plating
Fe	Ferrox treatment
P	Phosphate treatment
S	Steel material
